

***The Coral is Bleaching***; FLL Team Energy #1932; December 2024

Chorus:

The coral is bleaching,  
So you should be teaching,  
That's why we are talking  
And reaching out.  
The problems with pollution  
Warm waters, overfishing,  
The coral needs saving, of that  
There's no doubt.  
The ocean needs less CO2.  
Let us tell you what you can do.

Verse 1

The full August moon brings coral to life  
Which helps it to deal with strife.  
The coral's eggs look like snow  
They travel far with the waters flow.  
They plant themselves and need time to grow;  
Time to grow.

Verse 2

The ocean is warm, 91 degrees.  
The climate's not helping the seas.  
The corals bleach, lose their food;  
The ecosystems in a sad mood.  
Their tropic homes are too dead to view  
Dead to view.

Verse 3

The heat-resistant coral transplanted again  
Then reefs will grow and expand.  
A 3-D print will help coral grow;  
With singing for the fish below.  
We're singing to protect the coral show,  
Coral show.
